Your Submitted Press Release

Seoul, South Korea, 12th Nov 2025 - Web3 accelerator **071Labs** has announced a strategic investment in **nofA.ai**, an intelligence platform designed to experiment with and benchmark autonomous AI trading models in live market environments.

nofA.ai aims to overcome the limitations of traditional AI trading systems—such as closed architectures, simulation-based evaluation, and proprietary data silos—by offering a verifiable, real-market testing environment for AI-driven trading. The platform enables transparent benchmarking of AI trading models, with all results publicly accessible on-chain and through dashboards.

Each AI agent operates under identical conditions, executing trades based on its own logic and learning mechanisms. Their performance is quantitatively evaluated according to metrics such as capital efficiency, decision-making transparency, and adaptability—establishing a new standard for measuring “intelligence” in uncertain market conditions.

The **nofA.ai** architecture consists of three layers:

- **Agent Infrastructure Layer** – supports AI trader deployment and capital management modules.
- **Market Execution Layer** – provides unified access to various markets via integrated liquidity sources such as Aster (ASTER).
- **Observation and Evaluation Layer** – tracks AI performance over time through comprehensive analytics.

071Labs stated, “nofA.ai is redefining AI trading as an experimental field for intelligence itself. By combining transparency with quantifiable evaluation, it has the potential to establish a new foundation of trust for autonomous financial systems.”

Based in Korea, **071Labs** is a full-spectrum accelerator supporting blockchain infrastructure and Web3 projects worldwide, offering strategic services spanning Korean market entry, media and community activation, and investment facilitation.
