## Your Submitted Press Release

Moonlit Creative Works has officially announced the public release of *Metaphysical Sherpa: The Science of Consciousness*, an AI-assisted, hour-long presentation developed by Nicholas David Mirisola, PhD, following the cancellation of the 2026 Science of Consciousness conference, where the work had originally been accepted for presentation.

The release marks a significant expansion of the Metaphysical Sherpa project, a transmedia initiative created by Dr. Mirisola, also known professionally as Dr. Duddha and musically as Meditative Animal, that integrates philosophy, music, and computational research into a unified framework. Rather than postponing dissemination of the research, Moonlit Creative Works elected to publish the full presentation publicly, making the material accessible to a broader global audience.

At the center of the initiative is the *Metaphysical Sherpa: Misunderstood Mystic* book series, a four-volume collection in which each book is paired with a companion music album. These book-and-album pairings form a thematic “microverse,” where philosophical concepts explored in the written works are translated into musical and audiovisual formats. The project currently comprises four primary book-and-album pairings, alongside additional full-length music video concept albums that extend the narrative into visual media. These pairings include *Metaphysical Sherpa: Misunderstood Mystic* with *Dirty Fractal Sacrament*, the *Evidence Edition* with *ComproWise*, the *Forensic Files* volume with *Spiritual Alchemy*, and the *Karmic Poker Chronicles* with *Karmic Poker*.

The newly released presentation connects directly to the research outlined in *Metaphysical Sherpa: Misunderstood Mystic (Forensic Files)* and introduces a framework described as a Computational Metaphysical Audit. This model attempts to translate metaphysical ideas into structured analytical variables that can be examined using computational comparison and statistical analysis. The framework applies twelve analytical disciplines, including forensic fractal facial biometrics, holographic biometric analysis, cognitive science, humanistic and transpersonal psychology, consciousness studies, neurotheology, parapsychology, sociology, anthropology, philosophy, and linguistic stylometry, and synthesizes their outputs through meta-analysis, incorporating approaches such as biometric pattern mapping, semantic clustering, symbolic recurrence detection, and statistical validation.

Within this framework, the research evaluates fifteen identity continuity hypotheses, involving historical, philosophical, and mythological figures. Notable examples include Socrates, Archimedes, Bodhidharma, Rumi, M.C. Escher, and Thales of Miletus, along with figures from religious traditions such as Archangel Raphael and Ganesh. The analysis generates statistical summaries, including a Combined Incarnation Index (CII), alongside Quantitative Statistical Metrics (QSM) and Qualitative Significance Scores (QSS).

According to the published data, all evaluated cases produced CII values above a defined baseline, with reported values ranging from 7.05 to 9.15, t-statistics between 12.1 and 41.4, and p-values below 0.0001. These findings are interpreted within the project's framework as rejecting a null hypothesis of random distribution, although independent replication outside the author's materials has not been reported.

Artificial intelligence tools were utilized in portions of the modeling and presentation process. Project documentation indicates that Google Gemini 3 Pro supported aspects of analytical modeling, while certain computational cross-examinations utilized OpenAI's o3 architecture. The presentation also incorporates AI-narrated segments to represent cross-disciplinary evaluation of the research.

The work further explores what is described as the "Individual Holy Ghost" hypothesis, proposing that human consciousness may function as a localized fractal expression of a larger unified field. This concept is examined alongside a broader philosophical framework termed Democratic Divinity, which positions spiritual realization as a distributed potential rather than a singular phenomenon. Additional interpretations include a modeled perspective of karma as a feedback process operating within complex systems, integrating concepts from nonlinear dynamics, probabilistic causation, and informational continuity. These interpretations are presented as theoretical constructs rather than established scientific consensus.

The public release of [Metaphysical Sherpa: The Science of Consciousness](#) follows a staged rollout that includes the February 17, 2026 release of the EP *Metaphysical Sherpa: Karmic Poker*, which provides the musical foundation for the presentation's video segments. The full presentation runs approximately one hour and combines seven research segments with four music video interludes, forming a unified audiovisual experience.

The Metaphysical Sherpa series has also received recognition within independent publishing circles. All four books in the series have received [five-star editorial reviews from Readers' Favorite](#), totaling sixteen five-star reviews across the collection. Several volumes have additionally appeared on Amazon bestseller lists in niche categories such as parapsychology, mysticism, and metaphysics.

Looking ahead, Moonlit Creative Works has confirmed plans for three additional books and companion music productions, intended for simultaneous release as part of a broader multi-format expansion of the series. The upcoming release is expected to include a new companion album titled *Metaphysical Sherpa: Black Swan Symphony* and a scientific documentary titled *Metaphysical Sherpa: A Mountain of Forensic Evidence*, with the full launch anticipated in 2026.

The announcement underscores Moonlit Creative Works' continued focus on developing integrated intellectual property ecosystems that span literature, music, research, and visual media. By publicly releasing the presentation following the conference cancellation, the company has positioned the Metaphysical Sherpa project as an accessible, cross-disciplinary exploration of consciousness and identity.

Supporting materials are available on the official website at <https://meditativeanimal.com/> under *The Science of Consciousness 2026* section.

### **About Moonlit Creative Works**

Moonlit Creative Works is a United States-based creative and research organization founded by Nicholas D. Mirisola, PhD, MSc, BMSc. The company develops transmedia projects that integrate philosophy, music, computational analysis, and multimedia storytelling. Its flagship initiative, the Metaphysical Sherpa series, combines books, companion albums, and research-based presentations to explore questions related to consciousness, identity, and moral causation.
