Your Submitted Press Release

United States, 31st Jan 2026 - In a cybersecurity market crowded with compliance checklists and automated tools, ioSENTRIX is setting a higher standard: holistic security that drives true business protection. Headquartered in Herndon, Virginia, the global cybersecurity consultancy was recently featured on *Digital Journal* for helping Fortune 500s and fast-growing enterprises secure their applications, networks, and critical infrastructure—not just to meet compliance, but to stay in business.

"Without true security, business stops. Revenue stops. Customer loyalty disappears," said Omair Manzoor, Founder and CEO of ioSENTRIX. "We help companies avoid that loss by aligning cybersecurity with their goals, operations, and budgets. Compliance alone won't protect a company—holistic security will."

What differentiates ioSENTRIX from competitors is its business-aligned approach. Rather than relying on automated testing or one-size-fits-all frameworks, ioSENTRIX focuses on the intersection of security, strategy, and ROI. Its services—from penetration testing and red teaming to application security and secure SDLC/DevSecOps integration—are designed to strengthen operations, protect revenue, and build lasting customer trust.

Two recent engagements show the measurable impact of this approach:

- Financial Services Case Study: A major financial provider faced vulnerabilities in a legacy web application that could have led to $190 million in potential data exposure and financial loss. ioSENTRIX's security team identified and remediated the weaknesses, achieving full compliance with PCI-DSS and FFIEC standards while accelerating the product launch by three weeks.
- ioSENTRIX assessed a leading U.S. hotel chain's smart-room automation system. Testing revealed network segmentation flaws that could have allowed cross-room access, which ultimately could have led to $175 million in potential data exposure and financial loss. ioSENTRIX's remediation strategy eliminated the risk, protected guest safety, and ensured uninterrupted operations.

With clients reporting an 80% reduction in critical vulnerabilities within 90 days and 100% audit pass rates across industries, ioSENTRIX continues to prove that cybersecurity is not just technical — it's strategic. Its Penetration Testing as a Service (PTaaS) and Virtual CISO (vCISO) programs enable ongoing improvement, helping enterprises scale securely and confidently.

From assessment to assurance, ioSENTRIX delivers holistic, true security—empowering organizations to protect what drives their business most: trust, revenue, and resilience.
