## Your Submitted Press Release

Cory Mack, the visionary founder of Quantum Squint, has been making waves in the cybersecurity world with the launch of LeapARMM, a cutting-edge solution for codebase monitoring. Specializing in real-time change detection, Quantum Squint aims to address the critical need for secure and efficient software development.

The inception of Quantum Squint was driven by a simple yet profound need: to provide development teams with a robust tool for monitoring codebases in real-time. Cory and his team faced firsthand the frustrations of tracking code changes in fast-paced environments, where even a minor error could lead to significant downtime and security vulnerabilities. From this challenge, LeapARMM was born – a tool designed to automate codebase monitoring and rollback functionality, providing teams with peace of mind and seamless operation.

Quantum Squint's primary goal is to set new industry standards for code integrity monitoring and cybersecurity solutions. By continually refining tools like LeapARMM, the company aims to empower development teams to work smarter and more securely. Cory's commitment to innovation is evident in LeapARMM's change detection feature, which has already begun making significant impacts in the cybersecurity industry.

One of the biggest hurdles Cory and his team faced was developing a solution capable of handling the complexity and speed of modern development environments. LeapARMM had to be lightweight yet robust, capable of real-time detection and intuitive for developers. Through focused innovation, Quantum Squint has delivered a solution that identifies issues immediately, allowing developers to address problems efficiently and maintain code integrity.

Quantum Squint's clients benefit from knowing they have a reliable partner in safeguarding their development environments. With LeapARMM, clients can be confident that their codebase is being monitored proactively, with any changes detected and tracked in real-time. The goal is to provide peace of mind, reduce downtime, and prevent costly errors, enabling clients to focus on innovation.

Looking to the future, Quantum Squint is gearing up for an exciting showcase of LeapARMM's newest update at a major cybersecurity conference later this year. The team will be demonstrating their change detection technology live, connecting with industry leaders, and planning a significant marketing push to expand LeapARMM's reach. Stay tuned for more announcements and collaborations as Quantum Squint continues to grow.
