## Your Submitted Press Release

**United States, 22nd Apr 2026** - <https://www.policopybot.app> - In 2026, betting on Polymarket has stopped being a hobby. It's a market. Billions of dollars in USDC now flow through political odds, crypto event contracts, sports lines, and geopolitical outcomes - and the traders consistently profiting from it aren't the ones reading news. They're the ones copying the right wallets, in real time, on autopilot.

Enter **Polycop Bot**, the Polymarket copy trading bot that's quietly become the platform of choice for traders who are tired of missing the moves smart money makes. It scores wallets with AI, hooks directly into Polymarket's CLOB API, and executes copy trades in under a second - all while your funds stay in your own wallet.

But this isn't just another Polymarket bot. It's a full copy trading on Polymarket engine - wallet discovery, ranking, risk controls, Telegram alerts, and automated execution - built into one clean dashboard that anyone can activate in minutes.

Read the full platform breakdown here:

<https://www.policopybot.app/blog/policop-bot-polymarket-copy-trading>

## Why Polymarket Copy Trading Is the Edge of 2026

Polymarket has become the biggest decentralized prediction market in the world - and with that scale came a new problem: too many markets, too little time.

Most users open the site, glance at the trending events, place a few gut-feel bets, and move on.

A small group of wallets quietly cleans up year after year - because they research harder, size smarter, and exit faster than everyone else.

That's exactly where Polymarket copy trading comes in. Instead of trying to outwork the best traders on Polymarket, you mirror them. Every time they open a YES or NO position, Polycop Bot replicates it from your wallet - scaled to your budget, capped by your risk rules, and logged for you to review later.

Copy trading on Polymarket isn't about guessing anymore. It's about riding proven on-chain performance, fully automated, 24/7.

## What Makes Polycop Bot Different From Every Other Polymarket Bot

The Polymarket bot space has exploded in the last year. GitHub scripts, Telegram groups, half-finished trackers - most of them ask for your API keys, miss trades when it matters, or

simply never ship a working copy trading feature.

Polycop Bot was built specifically to fix that. The platform combines four things most competitors don't do well:

- **AI wallet scoring:** Every tracked Polymarket wallet is ranked by win rate, ROI, category consistency, drawdown, and trade volume. You see the numbers before you copy.
- **Real-time CLOB API execution:** When a copied trader opens a position, the Polymarket copy bot reacts in roughly half a second - not the 30-60 seconds most trackers need.
- **Non-custodial architecture:** MetaMask connects. Your keys never leave your device. The bot signs trades on your behalf, but it can never move funds out of your wallet.
- **Full risk control suite:** Stop-loss per wallet, daily loss cap, max bet per trade, exposure limits per category, and automatic pause rules. The bot alerts you *before* limits are hit, not after.

That's the difference between a Polymarket trading bot that's fun to play with and one you can actually leave running while you sleep.

## How It Works: Copy Trading on Polymarket in Four Steps

### 1. Connect Your Wallet

Open the Polycop Bot dashboard, connect MetaMask, and fund it with USDC on Polygon. No KYC, no email verification loops, no personal documents. On-chain payment activates access instantly - you're ready to configure in under two minutes.

### 2. Pick Your Traders

Browse the AI-ranked leaderboard of top Polymarket copy traders. Filter by category - political, crypto, sports, geopolitics - and by metrics: 90-day ROI, win rate, average position size, Sharpe-style consistency. Copy one wallet, or build a diversified portfolio of five to ten.

### 3. Set Your Risk Rules

Define the copy ratio per wallet (0.1x to 1x of the target's position), your max bet per trade, your daily loss cap, stop-loss thresholds, and notification preferences. Whatever the Polymarket copy trading bot does from here on, it does inside your rules.

### 4. Let It Run

The bot watches the Polymarket CLOB API 24/7. When a copied trader places a trade, Polycop Bot replicates it from your wallet in under a second, pings your Telegram, and logs it in your dashboard. You review, adjust, and scale - the bot keeps trading.

# Real-Time Telegram Alerts: Trading Without Staring at a Screen

One of the most requested features in Polymarket copy trading has always been notifications. Most traders don't want to live on a dashboard - they want to know what just happened, what they just bought, and whether anything needs attention.

The Polycop Telegram bot delivers exactly that. Every executed copy trade, every stop-loss hit, every daily summary, every risk-rule warning - delivered straight to your Telegram in real time. It's the difference between managing a Polymarket trading bot and being managed by it.

## Built for Developers Too: A Public Polymarket Copy Trading API

For power users and desks running multiple wallets, Polycop Bot ships a public REST API that exposes wallet rankings, live trade events, open positions, and historical performance. Build your own trade copier. Feed data into your quant stack. Run Polymarket copy trading programmatically across a portfolio of accounts.

Full API reference: <https://www.plycopybot.app/api>

## Flat Pricing, No Subscriptions That Trap You

Most Polymarket copy trading platforms lock features behind tiered SaaS subscriptions. Polycop Bot doesn't. Every plan unlocks the entire platform - every wallet, every risk control, every alert channel, the full API. You only pick how long you want access.

- **1 Day - \$49:** Test the full Polymarket copy trading bot on real markets. Great for event weeks (elections, playoffs, major crypto catalysts).
- **1 Week - \$99:** About \$14 per day - the sweet spot for traders running a campaign across hot news cycles.
- **1 Month - \$299:** Less than \$10 a day. Built for serious copy traders on Polymarket running diversified portfolios.

Payment is crypto-only: USDC or USDT on Polygon. No cards. No bank transfers. No KYC. Access activates the moment the transaction confirms.

## Non-Custodial by Design - Your Funds Never Leave Your Wallet

Every conversation about a Polymarket copy trading bot eventually ends at the same question: *who controls the money?*

With Polycop Bot, the answer is simple - **you do**. Always.

The platform:

- Never holds user funds or private keys
- Connects via MetaMask, meaning every signature happens on your device
- Executes trades directly on Polymarket's smart contracts on Polygon
- Is fully transparent - every copy trade is verifiable on [Polygonscan](#) and on Polymarket itself

That's why skeptical prediction market traders - the ones who've been burned by custodial platforms before - actually trust this Polymarket copy bot with serious capital.

## Who's Actually Using Polycop Bot?

The user base splits roughly into four groups:

- **Crypto-native traders** who want passive exposure to Polymarket's edge without spending hours researching every event.
- **Political junkies and sports bettors** who realized they can just copy the sharpest wallets in their favorite category instead of competing with them.
- **Quant developers** using the REST API to pipe Polymarket copy trading data into their own models.
- **Full-time prediction market operators** running multi-wallet strategies with Polycop as their execution layer.

What they all have in common: they stopped trying to beat Polymarket by hand. They started letting the right wallets do the work - and they let an automated Polymarket trading bot do the copying.

## Conclusion: Stop Predicting. Start Copying.

There's a hard truth about prediction markets in 2026 - being right is not the same as being profitable. Timing, sizing, exits, discipline, and execution speed matter just as much as the opinion itself. That's exactly where most retail traders lose.

Polycop Bot solves that problem by letting you ride the wallets that already have all of those pieces dialed in. It's the Polymarket copy trading bot built for people who want to be in the market without having to *be* the market analyst.

If you're trading on Polymarket and you're still doing it manually, you're playing on hard mode.
