Your Submitted Press Release

France, 20th Apr 2026 - <https://www.sniperbotsolana.com> - In 2026, thousands of new tokens launch on Solana every single day. But catching the next viral memecoin at block zero - before the bots, before the pump, before the rug? That takes sub-300ms speed and on-chain intelligence working in perfect sync.

Enter **Sniper Bot Solana**, the browser-based Solana sniper bot helping traders detect new launches, filter out rug pulls, and execute buys across 6 major DEXes - all without installing anything, and without ever handing over a private key.

But this isn't just another sniping tool. It's about how fast WebSocket-level detection actually works, how 12-point safety scoring filters the 90% of junk from the 10% of real opportunities, and how priority fees and slippage are tuned automatically for every launch type.

SniperBotSolana isn't just a bot - it's an edge engine built for traders who refuse to be late, slow, or rugged.

Explore the platform here:

<https://www.sniperbotsolana.com/blog/what-is-a-solana-sniper-bot/>

Why Speed and Safety Rule Solana Sniping in 2026

Solana's 400ms block time has turned memecoin launches into a millisecond game. Pump.fun, Bonk.fun, Raydium, Orca - new tokens appear constantly, and the traders who snipe them first take home the largest multiples.

Most users see a token after it's already up 10x.

Others catch it at launch - with safety checks, stop-losses, and take-profits already locked in.

That's what SniperBotSolana helps you do - detect brand-new tokens in real-time across 6 DEXes, instantly score them for rug risk, and execute in under 300ms via persistent WebSocket RPC subscriptions.

Every transaction is signed locally in your browser. No keys uploaded. No hot wallets held. No custody surrendered.

How It Works: Snipe-Ready in Under 60 Seconds

1. Open the Browser Bot

No installation, no downloads, no extensions. Just open [sniperbotsolana.com/app](https://www.sniperbotsolana.com/app) and connect your Solana wallet. All private keys stay on your device.

2. Choose Your DEXes and Filters

Monitor new launches on Raydium AMM v4, Pump.fun, Bonk.fun, Orca Whirlpools, and Jupiter - all at once. Set buy size, slippage range, and safety score threshold.

3. Let the 12-Point Safety Scanner Work

Every new token is scored across liquidity lock, dev wallet concentration, freeze/mint authority, metadata, holder distribution, and more. Only tokens above your threshold get through.

4. Auto-Execute in Under 300ms

When a qualified launch hits the chain, SniperBotSolana simulates the transaction against honeypot logic, auto-calculates priority fees, and fires the buy - before the retail crowd has even refreshed their screens.

5. Multi-Level Exits on Autopilot

Configure tiered take-profit levels and trailing stop-losses up front. The bot manages exits in real time while you sleep, work, or scout the next launch.

From Late Entry to First-Block Advantage

SniperBotSolana is trusted by memecoin hunters, on-chain degens, and systematic Solana traders who understand that in a 400ms-block world, edge is measured in milliseconds.

Instead of FOMO-buying pumps, they build position at launch:

- Sub-300ms WebSocket execution
- 12-point automated rug pull safety scoring
- Anti-honeypot transaction simulation before every buy
- Multi-level take-profit and trailing stop-loss
- Priority fee auto-calculation based on live network congestion
- Dynamic slippage tolerance per launch type
- Zero installation, zero custody, zero compromise

The result? You catch the launches others miss - and you skip the rugs that drain everyone else.

The Power of Non-Custodial, Browser-Native Architecture

One of SniperBotSolana's defining strengths is that it never touches your keys. All transaction signing happens client-side - directly in your browser, on your device.

The platform:

- Never transmits private keys to any server

- Never asks for seed phrases
- Never holds user funds
- Executes every trade from the user's own wallet on Solana mainnet
- Is fully verifiable via explorers like [Solscan](#) and [Birdeye](#)

That's why traders trust it with serious capital. No custody, no cloud wallets, no counterparty risk - just a browser tab and your own keys.

Simple, Fair Pricing - Pay Only When You Win

Unlike competitors who charge expensive monthly subscriptions whether you trade or not, SniperBotSolana runs on one radically simple model:

- **1% profit-share - only on winning trades.**
- No subscription fees.
- No monthly charges.
- No setup costs.
- If you don't profit, the platform doesn't either.

From solo hunters testing 0.1 SOL positions to full-time snipers running heavy flow, everyone gets the same toolkit - across all 6 supported DEXes.

Conclusion: Don't Chase. Snipe.

If you're trading Solana memecoins in 2026 and you're still buying after the pump, you're already giving away your edge.

Launches don't reward the loudest.

They reward the fastest, the safest-filtered, and the best-executed.

SniperBotSolana gives you all three - in one browser tab, with your keys in your pocket.
